About This Document

Intended Readership

This document is for any user of the Worldscope database who needs the data definitions and other information about the contents of the Worldscope database.

In This Document

This document includes Worldscope data definitions and other information about the contents of the Worldscope database.

Changes Since the Previous Issue

The only changes since Issue 10 of the Worldscope Data Definitions are as follows:

Corrections to reflect that the following items:

18390 Construction Work in Progress
18390 Construction Work in Progress

are included on the “face” of the detailed, annual Balance Sheet templates for Industrial and Other Financial companies and are not simply Supplemental asset items.

13th Jan 2012 - Revision of Worldscope Coverage with the addition of information on Reuter fed companies (Pg 37 under Chapter 5)

Corrections were done for 05015 fields as the column headings (High price, Low price & End market price) were interchanged.

24th May 2012 – Corrections made to definition of Deposit (03019) to exclude Sec sold under repurchase agreement

27th June 2012 – Deletion of fields and description relation to 5 year Summary (19760 – 19789), Investor Relations Address (18358) and Fully Diluted Equity (03506). These fields have been made obsolete.

7th Aug 2012 – Upgradation of TRBC code, item 07041, with the new TRBC 2012 schema codes. The new 2012 schema introduces a more granular 5th level as well as changes to sectors, groups, definition and titles that further support the analysis of companies across markets.

9th Oct 2012

1. Changes to the definition for Closely Held Shares - Updates to Closely Held Shares will reflect Strategic Holdings sourced from Thomson Reuters Ownership content which is dedicated to the collection of insider and institutional information.
2. Fields no longer be supported – Following codes Registrar Name (18121), Registrar Address (18122), Registrar Telephone Number (18123), Registrar Fax Number (18124), Registrar Website (18125), Registrar Email Address (18126) were discontinued.
3. Discontinuation of subset of notelinks – Discontinuance of 128 notelinks currently linked to data fields. However Note links provided in historical time series will continue to be available.

8th Apr 2013 – Addition of new fields Pension Data – Net Interest Cost (18822) and Healthcare Data - Net Interest Cost (18848)

12th Dec 2013 – 18175–Ordinary Profit to be applicable to Interim templates.
1st April 2014 – Addition of Deposits field (03019) for Other Financials template in the interim time series.
Addition of Tier 1 Capital (18228), Tier 2 Capital (18229), Risk Weighted Assets (18156), Capital Adequacy Ratio – Tier 1 (18157) and Capital Adequacy Ratio – Total Capital (18158) to Annual & Interim time series for Other Financial templates.

Chapter 1 Introduction to Worldscope

General Description

The Worldscope Database is the financial industry’s premier source of detailed financial statement data and profile data on public companies domiciled outside of the United States of America. It also contains complete coverage of US companies filing with the Securities Exchange Commission, with the exception of closed end investment companies. Using primary source documents and news clippings, Worldscope data analysts extract the data to global templates that are specific to industry groups. The templates take into consideration the variety of accounting conventions and are designed to facilitate comparisons between companies and industries within and across national boundaries. Please refer to the Database Methodology overview for more information regarding templated data.

Objective

Worldscope provides professional analysts and portfolio managers with the most comprehensive, accurate and timely data on publicly quoted companies around the world. Worldscope’s aim is to enhance the comparability of the financial data of companies from different countries and industries and across time periods.

Information Content

The total universe of companies contained on the database has grown from about 4,000 in 1987 to over 61,800 in November 2010. This includes approximately 37,450 currently active companies in developed and emerging markets, representing approximately 95% of global market capitalization. Worldscope contains extinct or inactive companies, i.e. those which have merged, liquidated or become privately held. History for these companies remains in the database.

Over 75 countries are represented, and include all countries in targeted global indices (FTSE All World, Dow Jones Global, MSCI World, MSCI EMF, S&P Global, S&P/Citigroup).

The base year for the Worldscope Database is 1980, although statistically significant company and data item representation is best represented from January 1985 forward. The following general types of information are available. The level of detail available for each company may differ depending on update type and company type:

- Investment banks: Corporate finance, mergers & acquisitions departments
- Corporations: Strategic planners, librarians, treasurers, controllers, auditors
- Academic and Public Sector: Research libraries
- Consulting firms: Management consultancies, accounting firms, pension consultants

Origins and Development

The Worldscope Database originated in the international investment management activities of Wright Investors’ Service, a U.S. based global money management firm. In 1987, Worldscope established a second research centre in Shannon, Ireland, to maintain and develop the database. In 1990, Worldscope/Disclosure
Partners was formed as a joint venture between Wright Investors’ Service and Disclosure Inc., a division of Primark Corporation (NYSE: PMK). In 1995, Worldscope/Disclosure established a third major research and data collection centre in Bangalore, India. Primark acquired the remaining interest in Worldscope in 1999. A fourth major research and data collection centre in Manila, Philippines was added with Primark’s 1999 acquisition of the Extel company database. In 2000, Primark Corporation was acquired by Thomson Corporation. In 2008, Thomson Corporation acquired Reuters.

Today, the content operations group, which supports the Worldscope database, employs over 500 people in seven global data centers.
Chapter 2  Database Methodology

Available Format

Worldscope is available through a variety of Thomson Reuters software products, including Thomson ONE products, Datastream, and Quantitative Analytics. Worldscope is also available via direct data feed, FTP. Please note that not all applications necessarily use the terminology and codes employed in this publication to describe data items. In such cases please refer to the application’s documentation or consult the Thomson Reuters Help Desk. In addition to Thomson Reuters software platforms, Worldscope is available on all the major equity applications serving the professional finance and investment communities. Diversity in International Financial Reporting

Despite recent advances by major exchanges, FASB, IASB, and other regulatory bodies, financial accounting practices and company’s presentation of financial accounts continue to be remarkably diverse around the world, due to differences in the legal and tax environments in which accounts are prepared. Naturally, linguistic and cultural diversity is reflected in financial accounts, but their form and content is additionally influenced by less obvious factors. These include the legal and taxation systems, transparency of corporate ownership, methods of corporate financing, the prominence of the accounting and auditing professions, and so on. The enormous increase in international investment flows in recent decades has highlighted the difficulties this diversity causes, as accounts prepared in one accounting environment are employed by users familiar with different practices. It is critically important to the efficient operation of capital markets that accounting information be mutually comprehensible to investors in different countries. This has been the impetus behind attempts to harmonize accounting standards, led by organizations such as the International Accounting Standards Committee and the Financial Accounting Standards Board.

Worldscope’s Treatment of Accounting Differences

Worldscope is designed for the user who needs to compare the financial information of companies from different industries and countries throughout the world. For the reasons mentioned above, there are limitations to the comparability and thus utility of raw data as reported in company accounts. Our analysis of financial statements from around the world leads us to classify two main areas in which differences can arise to impede such comparisons:

1. Valuation. Companies and accounting systems differ in the cost basis used in financial statements; in the utilization of accruals and provisions; as well as in the accounting methods for business combinations, depreciation, research and development, foreign currency translation, leases, and so on.

2. Disclosure or Presentation. There can be extreme variations, even within supposedly 'standard' accounting systems, in the terminology used in financial statements, the definitions of individual accounting items, the format of accounts and the depth of detail contained in the statements themselves and in the notes to the accounts.

Worldscope does not attempt to standardize data for all valuation differences between companies. We do not believe this is a feasible or desirable aim, given the lack of detailed published information and the sheer size and diversity of the database.

Where differences arise due to disclosure or presentation, however, it is possible to greatly improve the value of fundamental information to practitioners. In its simplest manifestation, this could mean that the reported ‘Sales’ of a tobacco company which include excise taxes should not be compared directly with the reported ‘Sales’ of another tobacco company which exclude excise taxes. There are numerous examples of such simple presentation issues which can cloud the usefulness of ‘raw data’, and of course this multiplies when different countries, industries, accounting systems, and different languages are involved.

Worldscope analysts use standard data definitions in the coding of financial accounts. By closely examining the nature and components of financial statements, footnotes and related disclosures, differences in
accounting terminology, presentation, and language are minimized. These definitions form the last section of this book. Any variations from our standard definitions are footnoted where it is not possible to aggregate or disaggregate data accurately. Format variations are overcome by use of the standard industry templates contained in section four of this book.

Worldscope data analysts carefully examine the terminology used in reported financial information. Words like 'short-term', 'long-term', 'current', 'operating', 'special', and 'extraordinary' can be variously defined from company to company, and in different industries and accounting systems. Because each Worldscope data item is precisely defined in a standard way, any reported items which deviate from this definition are standardized to increase comparability. In the case noted above, for example, the 'Sales' figures contained on Worldscope can be compared, because our field 01001 Net Sales or Revenues is always net of excise taxes, which is contained in a separate supplementary field (field 18063).

To illustrate with another example, general business practice regards twelve months as an appropriate dividing line between 'current' and 'non-current'. Yet many companies include long-term portions in their 'current' investments, receivables, and so on. This is only apparent when one sifts through the notes to the accounts, as our analysts are required to do. Any such non-current amounts are reclassified to long-term receivables, long-term investments, etc. Thus the utility and comparability of working capital and other ratios is enhanced. Similarly, when companies report 'long term debt' including the current portion (amounts maturing within one year), we back out this amount and include it in the item Short Term Debt & Current Portion of Long Term Debt (field 03051).

Another example is fixed assets impairment charges. It can be treated by companies as a non-recurring item. Yet other companies may consider it as an operating expense and include it within cost of goods sold. This is only apparent when one sifts through the notes as our analysts are required to do. Worldscope treats fixed assets impairments as non recurring and an adjustment is made to cost of sold and operating profit when it includes this item. Thus the utility and comparability of operating profit and ratios such as operating margin is enhanced. A separate field exists for impairment allowing the customer to add the data back into operating profit if he would prefer not to treat impairment as non recurring.

As a final illustration of Worldscope's methodology, minority interests may be separated from shareholders' equity or included and may or may not be deducted in arriving at net income. Our analysts reformat the accounts to standardize this for all countries, thereby improving the information value of such commonly utilized figures as Book Value (equity) per share and Earnings per share.

It is important to stress that Worldscope does not "change" the valuation of data reported by the company in its accounts. We simply scrutinize exactly what components each reported figure is made up of, and if necessary, rebuild the accounts using the same components the company originally used, to arrive at more uniform reporting templates. Our purpose is to help financial fiduciaries better deploy their time and efforts in analyzing financial statements around the world.
Chapter 3  Data Quality

Analyst Training

At Worldscope, quality assurance begins with the recruitment of multilingual corporate data analysts, generally with accounting or financial academic qualifications. About twenty-five major languages are represented within Worldscope, either by native speakers or fluent non-native speakers. Worldscope analysts undergo extensive and detailed training before being allowed to make any meaningful contribution to the updating and analysis process. A further period of three to six months is spent in on-the-job training under supervision. Detailed country-specific accounting and financial practices documentation has been developed to assist Worldscope data analysts in their understanding of international accounting and reporting practices. These manuals define each discrete database item in considerable detail, so that information is interpreted accurately and consistently throughout all countries across all analysts.

Automated Testing

Every piece of information entered into the database is subjected to a rigorous series of 2,300 computerized balance, magnitude, correlation and alpha tests, many of which are industry or country specific.

1. **Balance tests** check that formulas which should theoretically add up actually do. e.g. Total Assets (field 02999) = Total Liabilities & Shareholders’ Equity (field 03999), or Operating Income (field 01250) = Net Sales or Revenues (field 01001) - Operating Expenses (field 01249).

2. **Magnitude tests** compare data items in the current fiscal period with the same items for prior periods, and query items which exceed predetermined variances, e.g. Net Sales or Revenues (Field 01001) in the current year should be within a range of 100% to 125% of the prior year's figure.

3. **Correlation tests** are similar, but examine the relationships between appropriate data items in the same period, e.g. profitability and leverage ratios, for apparent outliers.

4. **Alpha tests** check the validity of alphanumeric (textual) data, e.g. checks for correct date formats, valid industry codes and correct field lengths.

Where these tests fail, analysts must recheck and if necessary make corrections. No information is allowed onto the database if any failed tests remain unresolved.

Supervision and Auditing

When data for any company is updated, the computer automatically generates a report for that company, listing the last five years of historical information, including the year that has just been updated. This is reviewed by the analyst's Team Leader for consistency and accuracy. The Team Leader must be satisfied that errors have been corrected before 'signing-off' on that company.

All quality is monitored and controlled by a team of Quality Control Associates. This department is charged with the task of examining and rechecking in great detail a random sample of each analyst’s and country group’s work, generating regular performance and quality reports for management, supervisors and analysts.

Timeliness

Timeliness is always one of Worldscope's key concerns and we strive to reduce the delay between publication of information and its availability to Worldscope users.

Timeliness involves issues such as filing requirements, the publication delay allowed to companies in various jurisdictions, and the speed with which Worldscope acquires any published documentation from the company or the local stock exchange.

Worldscope prioritizes the collection, analysis, and input of company information based on two key criteria.
First, priority is given to companies within a country with membership in one of a set of major global benchmark indices or local key indices.

Second, all companies within a country are prioritized by market capitalization or indicators of investor interest with the largest companies or companies having more than 5 individual broker forecasts updated first.

To ensure robust screening and sampling during peak reporting periods, preliminary data is updated from news sources. All companies also have Fast Update fields (approximately 100 key statement items) updated prior to the input of full Annual reports. Interim data is supported by both news and stock exchange sources and fuller interim documents where available.

These issues are discussed further in the section Frequently Asked Questions.

The provision of support to clients in the use of our information is a major part of a Worldscope subscription, and is available in many forms.
Chapter 4  Client Support Services

Data Support

Worldscope is a large and complex database, with a dynamic company population that is evolving daily. Thus, we maintain a dedicated and knowledgeable client support group to work directly with our clients to help them understand and utilize Worldscope data in their fiduciary roles. Worldscope client support services are considered an integral part of your annual Worldscope subscription fee and clients are encouraged to contact us directly whenever any questions arise with regard to Worldscope data or its use or this document.

Documentation

In addition to the Worldscope Data Definitions Guide several pieces of technical support material are available to assist you in using and understanding Worldscope. A monthly status report is also available.

In addition, many of our third party software vendors also provide documentation on their implementation of the Worldscope Database. Please contact your vendor to obtain copies of these.

Client Visits

Worldscope representatives will be happy to meet with clients by arrangement, to discuss any issues related to their use of the data.
Chapter 5  Frequently Asked Questions

Some Notes on this Section

The following section is organized alphabetically by topic. To see the full list of topics and questions, a Quick Reference List follows.

In the following section, reference may be made to data, collected and distributed by Worldscope, but not available on the particular software platform you are using to access the database, or available in a format different to that described below. For example, many CD-Rom applications of Worldscope no longer contain sufficient storage space to house the entire company universe contained in Worldscope Global. Any queries should be referred to your data software vendor, or to the Worldscope client support desk(s) whose details have been supplied in the introductory section entitled, ‘Client Support Services’.

Worldscope data items are identified below by a five-digit field number and a field name as contained in this book. These may not, in all cases, match the field names or numbers used by your data vendor.

In answering some of the questions in this section, Worldscope footnotes are mentioned. Footnotes are linked by our analysts to specific data fields, and may describe corporate actions (e.g., acquisitions, capital actions) and changes year to year (e.g., name changes, year-end changes, comparability of accounts) or provide explanatory notes to data items (e.g., the exclusion of a long-term portion from a current asset item).

Questions

1. **IS INFORMATION ON ACQUISITIONS AVAILABLE ON WORLDSCOPE?**

   Yes. Footnote K to Field 01001, Net Sales or Revenues details the companies in which a holding of more than 50% was directly acquired during the financial year. This footnote is always in the format "Acq'd n% of [company] in [year]."

2. **HOW CAN I TELL IF A COMPANY TRADES ADRs?**

   An "X" in Field 11496, Indicator – Trades ADR indicates that the company trades ADRs (American Depositary Receipts).

3. **DOES WORLDSCOPE SUPPLY SECTOR-LEVEL OR COUNTRY AVERAGES?**

   No, sector-level and/or country data is not currently supported.

4. **HOW DO I KNOW IF THE COMPANY ACCOUNTS ARE CONSOLIDATED OR UNCONSOLIDATED IN A PARTICULAR YEAR?**

   Worldscope utilizes consolidated account data when it is disclosed. In other cases, where there are no subsidiaries or no requirement to consolidate, only parent company accounts are available. Information on whether the company accounts are consolidated or unconsolidated in a particular year is given in the Accounting Practice Field 07531 Accounting Method for Long Term Investment > 50%. This field contains standard texts, such as: "All subsidiaries are consolidated", "No consolidation, cost basis" and "Consolidation for significant subsidiaries, others are on equity basis".

   If a company changes its consolidation practice in a particular year, a standard footnote is attached to Field 01001 Net Sales or Revenues to describe the change in reporting that has occurred (e.g. Footnote BB reads "Change from unconsolidated to consolidated reports").

5. **IS UNCONSOLIDATED/PARENT COMPANY DATA AVAILABLE ON WORLDSCOPE?**
The following key parent company fields are available on Worldscope where annual data is available on a consolidated basis but interim data is only reported on an unconsolidated/parent basis, or preliminary data is only available on an unconsolidated basis. Additional Parent company data fields are available for Japan, Korea, and Taiwan.

Field 18169 Unconsolidated/Parent Company Depreciation
Field 18170 Unconsolidated/Parent Company Sales
Field 18171 Unconsolidated/Parent Company Pre-tax Earnings
Field 18172 Unconsolidated/Parent Company Net Profit
Field 18173 Unconsolidated/Parent Company Earnings per Share

6. DOES WORLDSCOPE ADJUST DATA FOR CORPORATE ACTIONS SUCH AS STOCK SPLITS, STOCK DIVIDENDS, ETC.?

Yes. Worldscope adjusts all stock data for capital actions. Thus, share-related fields such as Common Shares Outstanding, Earnings Per Share, Book Value Per Share, Dividends Per Share, market prices and so on, all appear after adjustment for stock splits, stock dividends and rights issues. The adjustment factor is cumulative and is used to adjust the previous years to make them comparable with the most current year of reporting.

For example, a stock split of 2:1 in 2006 and a stock dividend of 50% in 2003 would result in an adjustment factor of 0.5 being applied to all stock data in 2005 back through 2003, and a cumulative adjustment factor of 0.33333 (that is, 0.66666*0.5) being applied to all stock data prior to 2003. The number of shares is divided by the factor, while per share data is multiplied by it.

Field 05576, Stock Split/Dividend Ratio contains the adjustment factors on the annual original time series. (calendar for the US and fiscal for non-US). Field 05575 Stock Split/Dividend Ratio – Fiscal contains the adjustment factors for fiscal per share data. It is available on all time series supported by Worldscope.

Footnote A to Field 05101, Dividends per Share contains a short description of the capital action(s).

These adjustments are also made at a security level.

7. WHAT COMPANIES ARE INCLUDED IN WORLDSCOPE AND WHAT ARE THE SELECTION CRITERIA?

7.1 POPULATION CRITERIA – WORLDSCOPE COVERAGE

7.1.1 Full Market Coverage

All domestic listed companies are targeted for the following Developed, Emerging and Frontier markets with exception of closed end investment companies and ETFs.

Developed Markets

Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, United Kingdom and United States

Advanced Emerging, Emerging, and Frontier Markets

7.1.3 Non-Traded Companies

A small number of non-traded/debt companies are included in the coverage. These generally relate to major industries (Banks, Utilities), U.S. companies filing Debt securities or have been added based on specific requests.

7.1.4 ADR’S

All ADR’s listed on the NYSE, ASE or NASDAQ and sponsored ADR’s which trade over the counter

7.2 CONTENT COVERAGE

Full detailed content is supported for companies within the United Kingdom and United States with the exception of private companies trading debt securities and closed end investment companies where included

For all other countries, full detailed content is supported if any of the following criteria is fulfilled:
Company is a constituent of the Baltic OMX10 index, FTSE All World, Dow Jones Global, MSCI World, MSCI EMF, S&P Global, S&P/Citigroup Broad Market or for selected local indices
Chapter 5 Frequently Asked Questions

Company has 5 or more broker estimates
Company has a market capitalization of greater than US$100 million (exceptions: Japan, China & Taiwan)
Companies not meeting any of the above criteria or companies/Frontier markets sourced from Reuters content will be covered under a ‘limited’ item template.

Exceptions:
Chinese companies that only trade “A” shares are covered under a “limited” item template
Taiwanese companies that trade on the Taiwan OTC market are always covered under a “limited” item template
For Japan, the TOPIX, Nikkei 225, FTSE All World, Dow Jones World, MSCI World, S&P Global or companies with more than 5 IBES estimates are collected under a fully detailed item template

8. WHAT CURRENCY IS USED TO UPDATE WORLDSCOPE DATA?

The currency in Worldscope is based on the Field 06027, Nation Code. Nation Code represents the Country of Primary Listing of shares traded by the company. Where the financial statements are reported in another currency, Worldscope converts them to local currency using the exchange rate(s) given in/from the statements, or where this is not available, using the relevant Worldscope exchange rate(s). Worldscope field 18215 — Exchange rate used for the income statement/cash flow and Worldscope field 18214 — Exchange rate used to translate the balance sheet are available. Security prices are also converted to local currency if expressed in another currency.

To facilitate cross-country screening Worldscope supplies the following additional key financial variables in U.S. dollars:

- Field 07210 Market Capitalization (U.S.$)
- Field 07211 Market Capitalization (U.S.$) - Current
- Field 07220 Common Equity (U.S.$)
- Field 07221 Common Equity (U.S.$) - Current
- Field 07230 Total Assets (U.S.$)
- Field 07240 Net Sales or Revenues (U.S.$)
- Field 07250 Net Income (U.S.$)

Worldscope provides month-end exchange rates for all countries represented on the database. These are provided on a derived country identifier and can be used to translate data into other currencies.

9. IF A COUNTRY HAS A CURRENCY REVALUATION/REDENOMINATION, WHAT DOES WORLDSCOPE DO?

Worldscope adjusts all historical fundamental and per share data for the revaluation/re denomination. In addition, Worldscope exchange rates are adjusted to reflect the revaluation/re denomination.

10. CAN I DETERMINE HOW EARNINGS PER SHARE IS CALCULATED?

Worldscope shows the value of earnings per share as reported by the company, in Field 18193 Earnings Per Share - As Reported, generally available from 1992 onwards. With one exception, this value will also appear in Field 05201 Earnings Per Share and 05202 Earnings per share - Fiscal, provided it is not out of line with Worldscope accounting policies as described in the data definition for this field. The exception would be U.S. companies or securities with off-ending fiscal years where Field 05201 Earnings Per Share contains the earnings for the calendar rather than the fiscal year. The fiscal year earnings is contained in Field 05202 Earnings Per Share - Fiscal Year End.
As different companies and countries have varying definitions of earnings per share, footnotes are added to Field 05201 to provide explanatory detail. For example, Footnote U reads "Based on average shares outstanding", and Footnote Z reads "Earnings per share estimated using net income after preferred dividends divided by the year end shares outstanding or latest shares available" (this note is added where Worldscope analysts calculate earnings per share based on that country's generic definition or when no earnings per share is reported by the company). In addition to the generic EPS field (05201), basic and fully diluted EPS are also available.

11. CAN I SEE THE IMPACT OF EXTRAORDINARY ITEMS ON EARNINGS PER SHARE?
Worldscope excludes extraordinary items reported after tax from earnings per share but includes exceptional items reported pre-tax. The per share values of the extraordinary credits and/or charges included in or excluded from earnings per share are also available.

12. HOW DOES WORLDSCOPE TREAT DIFFERENT FISCAL YEAR ENDS?
While a majority of companies have a fiscal year which coincides with the calendar year, many end their fiscal year on a date other than 31 December. Normally, the year to which Worldscope assigns financial data is the year in which the company's fiscal year ended, so fiscal years ending 28 February 2005, 20 November 2005 and 31 December 2005 are all treated as 2005 on Worldscope.

However, special rules apply when this occurs within a short period after the calendar year end. For non-U.S. companies, the fiscal year is determined by a cutoff date of 15 January. Data for a fiscal year ending on or before 15 January is classified as the previous year's result. For example, company data for a fiscal year ending 15 January 2005 is classified as 2004 data. Company data for a fiscal year ending 16 January 2005 is classified as 2005 data.

For U.S. companies, the fiscal year cutoff date is 10 February. Data for a fiscal year ending on or before 10 February is classified as the previous year's result.

In addition, users should note that the per share data for all U.S. companies is adjusted where necessary, to reflect a calendar year reporting basis.

13. HOW ARE FISCAL YEAR END CHANGES TREATED ON WORLDSCOPE?
Where a company changes year-end date and publishes financial statements for more or less than the standard twelve months, Worldscope adjusts any income statement data to reflect twelve months of operations, in order to make the information more comparable to prior and subsequent years. This adjustment is indicated in a footnote (generally N) to Field 01001 Net Sales or Revenues, which reads: "year end changed from [month of old fiscal year end] in [year]. Income statement and related items adjusted to reflect 12 mos. of operations through [new fiscal year end]"). Prior to 1988, such adjustments were not made and the changes in the length of the fiscal year for non-U.S. companies are noted with a footnote to Field 01001 Net Sales or Revenues.

Field 05350 Date of Fiscal Period End is available for each year, and contains the month, day and year on which the company's fiscal period ended. Field 05351 Length of Fiscal Period is also available. Field 05352 Month of Fiscal Period End contains the month of the most recent completed annual period.

It should be noted that in some cases of fiscal year end change, the transitional fiscal period provided by companies may be greater than twelve months, and therefore it may seem as if there is a 'missing year' on Worldscope. An example is a change from December to March where the annual data released is for December 2003 followed by March 2005.

Conversely, if a company changes from a March to a December year end then the December data would be used to overwrite the March data. Interim data provided will be maintained on the old year end basis until the new year end is complete. At that time the interim period data for both annual and interim series for the change year is overwritten to correspond with the new year end.

Interim data provided will be maintained on the old year end basis until the new year end is complete. At that time the interim period data for both annual and interim series for the change year is overwritten to correspond with the new year end.
14. IN WHAT FORMATS IS WORLDSCOPE AVAILABLE?
The database is available directly from Worldscope or via internal or 3rd party software platforms. Further information on delivery platforms is available on http://thomsonreuters.com/products_services/financial/ or by calling our client support desk directly.

15. HOW MUCH HISTORY IS AVAILABLE FOR COMPANIES ON WORLDSCOPE?
The earliest annual information contained on Worldscope is for 1980. Many North American companies and larger companies in the other developed markets have history back to this date. Annual history for most other companies in developed market commences in the mid 1980s for medium sized and mid 1990s for small sized companies.
Worldscope expanded annual data coverage to include emerging markets in the early 1990s. Companies and countries have been gradually added since then. Asia-Pacific coverage increased significantly in 2004 and 2005.
For new additions and IPOs, up to 4 years of historical data may be added.
Companies targeted for a full detailed update normally have a minimum of four years of financial information, with the obvious exceptions of newly created companies or recent privatizations. Smaller market capitalization coverage for which a summary data set may be targeted is added with one to two years of data. See FAQ 8 related to coverage criteria.
Data was first added to the Interim Time Series template for US companies in 1998 and non-US companies in 2001. Please note that there is also a limited amount of interim data, potentially with history back to 1980, stored within the annual data templates.

16. DOES WORLDSCOPE PROVIDE INFORMATION ON INACTIVE OR DEAD COMPANIES AND SECURITIES?
Worldscope’s prime aim is to target companies with listed equities. Worldscope contains extinct or inactive companies, i.e. those which have merged, liquidated or become privately held. History for these companies remains on the database.
Company data for inactive or dead companies may not be necessarily available on all delivery platforms.

17. HOW CAN I DETERMINE IF A COMPANY IS INACTIVE?
If data (in the form of a date) is present in Field 07015 Inactive Date (Company) then the company is inactive as of that date. The reason why the company became inactive can be found in Footnote N attached to Field 00000 Company Status. This note contains the standard text “Company inactive:”, followed by an explanation, e.g. “Acquired by XYZ Corporation in May 97” or “Delisted - information will no longer be provided as of Jan 96”.

18. HOW CAN I DETERMINE IF A SECURITY IS INACTIVE?
If either Field 07015 Inactive Date (Company) or Field 07012 Inactive Date (Security) contains data (in the form of a date) on the security identifier, then the security is inactive. On the main company record, security inactive dates are provided in Fields 20011, 20111, 20211, 20311, 20411, 20511, 20611 Inactive Date - Multi Share 1-7, respectively.

19. HOW CAN I DETERMINE WHETHER A COMPANY HAS CHANGED INDUSTRY?
A Footnote (generally A) to Field 00000 Company Status will record whether the company has changed industry, necessitating a change in the way Worldscope analysts have collected the financial accounts. For example, a company with footnote text of “Changed from financial format in 97” may have traditionally been a rental and leasing company whose construction or other industrial activities became predominant, causing a change in reporting format in 1997. Obviously, the historical detail that is available for companies which have changed in this way will vary in prior years.
20. WHAT INDUSTRY CLASSIFICATIONS ARE AVAILABLE WITHIN THE WORLDSCOPE DATABASE?
Worldscope carries SIC (Standard Industrial Classification) codes for each company. These codes were developed by the U.S. government. Worldscope assigns SIC codes based on contribution of business segments to net sales or revenues, in descending order of importance.

Each company is also assigned a General Industry Classification (Field 06010), which reports whether a company is an industrial, utility, transportation, banking, insurance or other financial company. This item can be used to determine the template followed/data items supported. Companies classified as Industrial, utility or transportation utilizes the Industrial template.

Worldscope provides the Thomson Reuters Business Classification (TRBC) codes (Field 07041). TRBC is a global, comprehensive industry classification system owned and operated by Thomson Reuters. Companies can be viewed at any of 5 levels – 10 Economic Sectors; 25 Business Sectors, 54 Industry Groups, 36 Industries and 837 Activities. TRBC codes are assigned to all companies covered by Fundamentals.

The FTSE/Dow Jones Industrial Classification Benchmark (ICB) codes are also available within Worldscope but require a separate license with FTSE.

21. If a security is traded on more than one exchange, which price quote is followed?
Irrespective of whether the security trades on a domestic exchange the primary quote is followed for the security. Primary quotes are assigned based on trading volumes on the various exchanges.

22. WHAT DOES WORLDSCOPE DO IF A COMPANY HAS MORE THAN ONE TYPE OF SHARE?
If a company has only one type of common or ordinary share, all Worldscope information for that company is contained in a single company record.

If there are multiple types of common or ordinary share, Worldscope contains both a main company record as well as up to seven separate security-level records. 'Common or ordinary' includes hybrid security types whose structure and associated rights contain elements of 'preferred' equity. In such cases, participation in profits and liquidation proceeds, as well as maturities and conversion rights, are examined closely prior to their inclusion. The main company record and the security level records are linked by means of their Worldscope Identifier (Field 06035). Each security-level record contains a reference to the Worldscope identifier of the main company record in Field 06036 Primary Issue Identifier.

23. WHAT IS THE DIFFERENCE IN THE DATA SHOWN AT THE COMPANY LEVEL AND DATA SHOWN AT THE SECURITY LEVEL?
A main company record contains all general and fundamental data along with the combined number of shares (adjusted to like par value). Per share earnings, book value and cash flow are based on the combined number of shares Dividends per share and stock prices are provided for the primary share type. The selection of that share type is described under the next question. Further details can be seen in a footnote to Field 00000 Company Status. Typical text could read "Earnings, book value and dividend payout are based on ordinary and preference shares combined. Prices and dividends are for ordinary shares only" or "Prior to Jan 1997, earnings and book value are based on ordinary and preference shares combined. Preference shares were converted to ordinary shares in Jan 1997. Prices and dividends are for ordinary shares only".

The main company record also contains summary data for up to seven share types (Fields 20001-20648 as shown in the Industry Specific Templates under the heading Multiple Share Data). This includes their Worldscope Identifier Type of Share and other summary valuation data. These items are available for 1987 and subsequent years.

The separate security-level records contain more detailed market, share and stock performance data for each individual share type. Please note that data in the Security-level record is available for 1987 and subsequent years unless otherwise stated in the definition of the item.

24. IF A COMPANY HAS MORE THAN ONE TYPE OF SHARE, HOW DOES WORLDSCOPE SELECT THE SHARE FOR THE MAIN COMPANY RECORD?
Worldscope selects the share to represent the company on the main company record based on the following criteria:

a. It is available for foreign investment*
b. It is more widely traded

The share type chosen to represent the company can be found in Field 06005 Type of Share on the main company record.

*Some markets impose restrictions on foreign ownership of shares, and they may be required to list and trade separately from the shares owned by local investors - especially when the ownership ceiling has been reached - although in other respects they do not constitute a separate security class. Worldscope may choose the local share in such cases, as this is the underlying security. Thailand and Indonesia are examples.

25. HOW CAN I DETERMINE IF A COMPANY CURRENTLY HAS MORE THAN ONE TYPE OF SHARE?

An "X" in Field 11501 Indicator - Multiple Share Company indicates that the company has or has had more than one type of active common or ordinary share, regardless of whether they are currently trading or not.

26. HOW DOES WORLDSCOPE HANDLE COMPANY NAME CHANGES?

Information regarding company name changes can be found in Footnote N to Field 01001 Net Sales or Revenues for the year in which the change of name occurred, or the latest year updated where the change is recent. This footnote is always in the format "Name changed from [old name] in [year]".

Worldscope company and security identifiers for U.S. companies are changed whenever a name change or other corporate action leads to a change in the CUSIP code issued by the Committee on Uniform Security Identification Procedures. When this happens Worldscope, with the exception of a few identifying fields, will delete the data on the old record and re-update it to a new record. Presence of data in Field 00000 Company Status indicates that the company or security had a CUSIP change. The data in this field contains the text "CUSIP changed to [new CUSIP]". Footnote C attached to Field 00000 Company Status will identify the new name of the company.

27. HOW CAN I DETERMINE WHICH COMPANIES OR SECURITIES ARE NOT TRADED?

Non-traded companies can be selected by checking for the absence of data in Field 05427 Stock Exchange(s) Listed. Since inactive companies and securities on Worldscope have no stock exchange indicator either, the user may want to narrow this search to exclude companies which have a value in Field 07015 Inactive Date (Company) and/or Field 07012 Inactive Date (Security). This will leave all non-traded active companies.

Further information regarding non-traded companies can be found by examining the following footnotes attached to Field 05301 Common Shares Outstanding:

28. HOW DO I KNOW IF INFORMATION ON WORLDSCOPE IS PRELIMINARY?

Indicator- Data Update, field 07034 can be used to identify preliminary data. The presence of a 1 in this field indicates the data provided is from a preliminary source. A secondary method is the use of the footnote SP on Field 01001 Net Sales or Revenues, any data for that year can be regarded as preliminary. The footnote is removed when detailed financial statements are updated, generally upon receipt of the annual report.

29. DOES WORLDSCOPE CARRY PROFORMA DATA?

Pro forma data may occasionally be shown for a company that has recently become publicly held and is footnoted on Field 00000 Company Status, e.g., "Company became publicly held in 1996. Prior data pro
forma”. The number of years of pro forma data is generally restricted to the amount of history contained in the prospectus or other registration documents at the time of the initial public offering.

30. DOES WORLDSCOPE CARRY RESTATED DATA?

- This data is provided in separate time series utilizing existing Worldscope fields. Original data is not overwritten.
- Four indicator fields facilitate the use of restated content.
  - Indicator - Restated data exists
  - Indicator - Restatement type
  - Indicator - Early Release
  - Indicator - Restatement Reason Code
- Per share data in the restated annual series will be provided on a fiscal basis only. Per share fields for U.S. companies currently provided on a calendar basis in the annual series content will not be supported in the restated content series. All original and restated interim series per share data is on a fiscal basis.
- Restated data is provided for one prior year accounting period (including interim periods).
- Price and dividend data as well as related ratios are not included in the restated series content.
- Financial ratios that cross time periods are not included in the restated series.

31. WHAT ARE THE SOURCES OF WORLDSCOPE DATA?

Our primary information source is the companies themselves, which send us all publicly available documents and financial statements (annual and interim) as soon as they are published. The full audited annual financial accounts supply much of the detailed information on the database. We also receive detailed filings from many regulatory agencies, such as the Securities and Exchange Commission (USA) and the Japanese Ministry of Finance.

Preliminary data is often available before the publication of the annual or interim accounts by the company. This information is made available on many Worldscope platforms. Sources of preliminary data include press releases issued by the company itself, statutory filings with stock exchanges or other regulatory bodies, and naturally the financial press and newswire services. Worldscope subscribes to a stock exchange publication and, where newswires are not sufficient, a major financial newspaper for each country on the database.

32. HOW SOON AFTER THE FISCAL YEAR END OR INTERIM PERIOD END OF A COMPANY CAN I EXPECT TO SEE THE ANNUAL DATA ON WORLDSCOPE?

There are three considerations related to timeliness:

a. Reporting/filing requirements. There are wide variations internationally in the length of time legally allowed between the fiscal period end of a company and the publication of its financial statements. While preliminary data and estimates of the company's performance for the fiscal year are generally available and are included on Worldscope soon after the year end, companies may take some time before making their audited annual accounts available to the public. This also applies to interim information, which is generally less regulated. Reporting regulations vary from country to country. In some instances companies may have up to 9 months after the end of the financial year to file an annual report with the statutory authorities. Most countries specify a 4 to 6 month reporting deadline and companies can delay their filing until this deadline is in sight.

b. Document acquisition. Worldscope aggressively pursues various sources of information. Companies themselves remain the primary source in most countries. In this, we are significantly aided by the Documents Acquisition team, whose corporate document acquisition activities are among the most extensive in the world.

c. Document update. When annual information is received, it is assigned an update priority generally based on inclusion in a targeted index, investor interest, and market capitalization. This becomes especially
important where annual reports are received en masse due to clustering of fiscal year ends, e.g. Japan's predominant 31 March year-end. At such times, prompt turnaround may not be possible for all companies. Data processed from news sources is generally turned around within 72 hours. Key items from the final accounts are available within 5-10 days of receipt of document.

33. **IS A UNIQUE IDENTIFIER AVAILABLE FOR EACH COMPANY ON THE WORLDSCOPE DATABASE?**

Yes. Field 06105, Worldscope Permanent ID, provides a unique identifier for all company and security entities. For all companies with the exception of U.S., field 06105 corresponds to Field 06035, Worldscope Identifier. For U.S. companies and securities only, the Worldscope Identifier is based on the CUSIP code issued by the Committee on Uniform Security Identification Procedures. Therefore, when a CUSIP change occurs, the Worldscope Identifier must also change. In such cases Worldscope, with the exception of a few identifying fields, will delete the data on the old record and re-update it to a new record. Presence of data in Field 00000 Company Status indicates that the company or security had a CUSIP change. The data in this field contains the text “CUSIP changed to [new CUSIP]”. Footnote C attached to Field 00000 Company Status will identify the new name of the company.

34. **IS INTERIM FINANCIAL STATEMENT DATA AVAILABLE ON WORLDSCOPE?**

Worldscope contains Interim time series financial statement data. The time series available may be quarterly, cumulative quarterly, semi-annual or trimester as determined by the individual company's reporting pattern and is in addition to providing the key interim income statement fields on the annual times series. Interim time series data includes summary Balance Sheet, Income Statement and Cash Flow Information where this information is reported by the company concerned. (The Interim data items available on the annual time series are listed in the 4 main industry templates under the heading Annual Series Interim Data and date back to 1980. The full Interim data subset, including Financial Statement data, is available in time series. Items supported are listed under the Interim Time Series Template heading . This data is generally available from Quarter 1 1998 for US coverage and from 2001 for non-US coverage. It should be noted that both the reporting and detail of Interim data can vary greatly by country and company.

35. **WHAT IS A FAST UPDATE AND WHAT BENEFITS DO THESE UPDATES HAVE FOR TIMELINESS?**

The Fast Update consists of a subset of 350 Financial Statement items and ratios, which are generally updated within 5 days of receipt of the annual filing or annual report. This follows the update of preliminary data from news sources which is targeted for 48 hours from report. The Fast Update was introduced by Worldscope to improve the timely provision of key data, especially at peak times when it is not possible to fully update all annual reports on the day of receipt.

Generally, companies will:

a. first issue a Press Release with very summarized financials possibly followed by
b. a preliminary report (for example: the Regulatory News Service in the U.K., BALO in France and Tanshin filings for Tokyo listed companies)
c. And finally the full audited Annual Report.

The pattern of Worldscope updates is as follows:

a. Press Release information is captured on Worldscope, targeted within 48 hours of publication.
b. Fast Update, sourced from the 10K or annual report, 5 days.
c. Final update.

Priority is given to companies which are index constituents, companies with indicators of market interest and/ or with high market capitalization.

**Note:** For Limited Data Set companies (see Frequently Asked Question 38 below) a Fast Update is not done and the Final update follows the Preliminary Update.

36. **HOW CAN I IDENTIFY FULL AND FAST UPDATES ON WORLDSCOPE?**
Worldscope field 07034 - Indicator – Data Update can be used to determine if the update for a given period is Preliminary, Flash, FAST & Final.

Preliminary (1) indicates the data is sourced from preliminary announcements. It may be used for both interim and annual time series.

Preliminary - Flash (5) indicates the data is sourced from preliminary announcements but that only data from the face of statements has been provided. Once all data from the preliminary release is completed this indicator will change to (1).

A Fast indicator (2) is provided for annual time series data to indicate that a subset of key financial data points has been completed using as source the final annual reports.

The Final indicator (3) is used for annual and interim series when updates are complete from final sources.

The Final - Flash indicator (6) is used to identify initial updates that only incorporate reported items from the face of the financial statements. Once all data from the final document is completed this indicator will change to (3).

A setting of 4 will be used to indicate when only Worldscope specified unconsolidated fields have been updated. It may be used for both the annual and interim time series.

Worldscope also contains three current fields to help you distinguish these updates.

Field 07013 Year of Fast Update contains the latest year for which Fast Update information is available e.g. “2006”.
Field 07016 Latest Annual Updated contains the latest year for which the latest Worldscope full update is available, e.g. “2006”.
Field 07035 Latest Interim Date

37. WHAT DATA IS AVAILABLE FOR IPOs - E.G. NEWLY LISTED COMPANIES?

A newly listed company or IPO may provide insufficient data in the prospectus to populate a detailed update. In this instance, Worldscope will add the company to the database with the level of financial data provided (may only be a few items) until more detailed information is published by the company concerned.

38. WHAT IS A LIMITED DATA SET COMPANY?

Companies that do not meet the criteria for fully detailed update on Worldscope, on the basis of Market Capitalization or other criteria (see Question 8 above) may be added with a Limited Data Set of information. This subset is similar to the Fast Update subset outlined in Frequently Asked Question 35 above and is detailed in the templates from page 250. In October 2010, Worldscope contained 9,042 active and 2,999 inactive Limited Data Set companies across a broad range of countries.

The current field 11519 Indicator - Limited Data Set Company identifies these companies, which will have Limited Data updates going forward.

A small number of companies, which previously had main market listings and were subsequently transferred to OTC market, may have prior year Full Updates. Annual field 07033 Full/Limited Coverage Indicator will show, for each year, whether the company has a Full or Limited update.

39. DOES WORLDSCOPE COVERAGE INCLUDE ADRs (AMERICAN DEPOSITORY RECEIPTS)?

Yes. ADRs trading on the NYSE, ASE, and NASDAQ under both sponsored and unsponsored programs are targeted under the coverage criteria. In addition, companies participating in sponsored programs and trading OTC are also targeted. See ADRs Template and ADR Frequently Asked Questions which follows the Frequently Asked Questions section for further information.

40. IS PER SHARE DATA PRESENTED ON A FISCAL OR CALENDAR BASIS?

All per share data for non-U.S. domiciled companies and securities and ratios derived from the per share data on the annual and interim time series is presented on a fiscal basis.
For U.S. domiciled companies and securities all interim time series data is provided on a fiscal basis. The annual series per share data fields and related data and ratios listed below are presented on a calendar basis:

- 05476 Book Value per Share
- 05505 Capital Expenditure per Share
- 05501 Cash Flow per Share
- 18202 Cumulative Effect of Accounting Change per Share
- 05228 Discontinued Operations – Total – per Share
- 18205 Discontinued Operations – Total – per Share
- 05101 Dividends per Share
- 05102 Dividends per Share – Gross
- 05340 Dividends per Share - 5 yr avg
- 05201 Earnings per Share
- 05230 Earnings per Share after Extraordinary Items

- 05004 Market Price – 5 Year Average High
- 05005 Market Price – 5 Year Average Low
- 08001 Market Capitalization
- 08004 Market Capitalization – Public

The following multiple share items are also provided on a calendar basis for US companies:

- 20044, 20144, 20244, 20344, 20444, 20544, 20644 Dividends per Share - Mult Share 1, 2, 3, 4, 5, 6, 7
- 20043, 20143, 20243, 20343, 20443, 20543, 20643 Earnings per Share – Mult Share 1, 2, 3, 4, 5, 6, 7

Further details related to fiscal years and per share data can be found in the definitions section. U.S. companies/securities can be identified by checking for 840 in field 06027 Nation Code.
All per share data and related ratios for ADR companies are presented on a fiscal basis. Within the Worldscope database, unless otherwise stated, the following data items contained in the annual time series data are disclosed on a calendar year basis for U.S. companies and on a fiscal year basis for non-U.S. companies:

- All price and per share data (e.g.: market prices, market capitalization, earnings per share, dividends per share, book value per share, etc.) listed under the headings “Stock Data Annual Statistics” and “Stock Performance Annual Statistics” in the templates section.
- All interim data on the annual time series under the heading “Annual Series Interim Data” in the templates section.
- Calendar year end basis means that the data is calculated on a December year-end basis whereas fiscal year end basis means that data is calculated on the company’s fiscal period end date basis.

Taking the EPS data as an example:
A company has a fiscal period end date of 30-06-2009 and reports quarterly information.

Calendar year end basis:
For the year 2009, EPS Q1 (05221) is at 31-03-2009; EPS Q2 (05222) is at 30-06-2009; EPS Q3 (05223) is at 30-09-2009 and EPS Q4 (05224) is 31-12-2009. Annual EPS (05201) is at 31-12-2009.

Fiscal year end basis:
For the year 2009, EPS Q1 (05221) is at 30-09-2008; EPS Q2 (05222) is at 31-12-2008; EPS Q3 (05223) is at 31-03-2009 and EPS Q4 (05224) is at 30-06-2009. Annual EPS (05201) is at 30-06-2009.

41. HOW HAS WORLDSCOPE HANDLED THE EURO?
The currency in which you receive Worldscope data may be determined by your product platform. In Worldscope, all historical data has been converted to euros utilizing the 6 digit fixed exchange rate at the date of adoption and the associated Country Information changed. The historical legacy currency is maintained under alternate currency fields available in the direct delivery feed.

42. WHAT ARE THE CHARACTERISTICS OF THE DATA SOURCED FROM REUTERS FUNDAMENTALS?
- The content supported for the expanded coverage reflects a subset of items similar to the limited template data fields. (See Chapter15, Reuters Fundamentals-sourced Companies – Template, for a full list of items to be supported by industry template.)
- The items provided may not follow the Worldscope definition/adjustments.
- 5 or more years’ annual and interim data is available with the exception of more recent IPOs.
- Data is only provided on a company entity basis. Security entities are not supported.
- Industry Group (item 06011) - with the exception of Insurance companies this is not supported for Reuters Fundamentals-sourced companies (for which Indicator – Reuters Data Company, item 11563 exists). The codes that follow are provided in these cases. (Note that SIC codes are supported.)
  - 8610 – Industrial/Commercial format; Industry group NA
  - 8620 – Utilities; Industry group NA
  - 8630 – Bank format; Industry Group NA
- General Industry Classification (item 06010):
  - Companies assigned code 8610 (see above) will be classified as Industrial (1) as this will correspond to the template type to be supported. Other Financial companies reporting in an industrial format such as REITs will be included here.
  - Companies assigned code 8620 will be classified as Utilities (2) for which the Industrial Template is used.
• Companies assigned code 8630 will be classified as Bank/Savings & Loan (4) as this will correspond to the template type supported. Other Financial companies reporting in a bank type format will be included here.

• New indicators have been provided at the company level where all data/periods content are sourced from Reuters Fundamentals as well as at the time series level to indicate periods which contain the subset of items sourced from Reuters Fundamentals. Two further new indicators identify companies that do not trade equity securities or where price data is unavailable from our sources. Definitions of the new indicators are available in Chapter 19, Alphabetical List of Field Definitions. The following is a list of the new indicators:
  • 11528 Indicator – Non-Traded Company/Security
  • 11568 Indicator – Pricing Unavailable
  • 11563 Indicator – Reuters Data Company
  • 11564 Latest Reuters Data Year
  • 11565 Indicator – Period Sourced from Reuters Content

• In order to reflect the new update process two additional update types have been added to item 07034, Indicator – Data Update, and the revised definition of that item is also available in Chapter 19, Alphabetical List of Field Definitions.
Chapter 6  ADR Frequently Asked Questions

1. WHAT ADRs ARE INCLUDED ON WORLDSCOPE AND WHAT ARE THE SELECTION CRITERIA?
The targeted population includes all ADRs listed on the NYSE, ASE or NASDAQ and sponsored ADRs which trade over the counter except for ADRs representing companies from countries not targeted for coverage.

2. HOW ARE ADRs CLASSIFIED ON WORLDSCOPE?
ADR s are treated as “company” entities on Worldscope. A link to the underlying foreign company represented by the ADR is provided if the company is included in the database. Financial statement and other templated data on the ADR Identifier other than U.S. GAAP data, pricing and dividends is derived from the underlying non-U.S. company and security adjusted by a conversion rate into U.S. dollars and the ADR factor, where applicable.

3. HOW CAN ADR COMPANY RECORDS BE IDENTIFIED?
ADRs on Worldscope can be identified by checking for the presence of data in field 11503 Indicator – ADR. In addition, ADRs have an Entity Type (field 06100) of “A”.

4. HOW ARE ADRs LINKED TO THE UNDERLYING NON-US COMPANY?
The Worldscope Identifier of the underlying non-U.S. company and security represented by the ADR is provided in fields 06115 ADR Non-U.S. Company Identifier and field 06116 ADR Non-U.S. Security Identifier, respectively. This link is only provided when the non-U.S. company is included in Worldscope.

5. HOW IS ADR FINANCIAL STATEMENT AND OTHER TEMPLATED DATA DERIVED?
With the exception of U.S. GAAP data, pricing and dividends, standardized data on the ADR identifier is derived by a transfer from the non-U.S. company or security identifier. During the transfer, standardized data is converted into U.S. dollars and shares outstanding and per share data are additionally adjusted by the ADR exchange ratio. The average monthly exchange rate during the company’s fiscal year (field 06101) is used to convert historical income statement items, cash flow items, and earnings per share. The fiscal year end exchange rate (field 06102) is used to convert historical balance sheet items and book value. The current exchange rate (field 06103) at the time of the update of the current item on the underlying non-US identifier) is used to convert all current items. The ADR exchange factor (field 05577), which is derived from the ADR ratio, is applied to shares and per share amounts after translating to U.S. dollars. Interim data in the current fiscal year (where year end earnings have not yet been reported) is translated to U.S. dollars using the current exchange rate and, when the fiscal year end data is updated, the interim data is recalculated using the year-end average exchange rate.

6. IS PER SHARE DATA PRESENTED ON A FISCAL OR CALENDAR BASIS?
Unlike the Worldscope presentation of U.S. companies, all per share data on ADRs is shown on a fiscal year basis rather than a calendar year basis.

7. DOES WORLDSCOPE CARRY U.S. G.A.A.P. INFORMATION FOR ADRs?
Yes, 135 additional items are available only on ADR company records. The majority of these additional items are Financial Statement, per share items and ratios which reflect data adjusted to conform to U.S. G.A.A.P., for example Field 06795 Common Equity-GAAP or 05490 Book Value per ADR - GAAP. See ADRs Template for further information or details.

*Stock Data, Annual Item; Field 05476*

**All Industries:**

BOOK VALUE PER SHARE represents the book value (proportioned common equity divided by outstanding shares) at the company's fiscal year end for non-U.S. corporations and at the end of the last calendar quarter for U.S. corporations.

Preference stock has been included in equity and the calculation of book value per share where it participates with common/ordinary shares in the profits of the company. It is excluded in all other cases, deducted at liquidation value for U.S. companies and at par value for all others. In Germany, special (tax-allowed) reserves have been excluded. In Finland, 100% of untaxed reserves are included prior to 1994 and are being phased out over subsequent years. Norway includes 100% of untaxed reserves prior to 1992. In Sweden, untaxed reserves adjusted by the reciprocal of the standard tax rate are included in the calculation of book value prior to 1991.

For U.S. corporations, common and common equivalent and fully diluted book values are shown, when available.

For companies with more than one type of common/ordinary share, the book value is based on combined shares adjusted for the par value of the share type identified in field 06005 - Type of Share.

This item is also available at the security level for 1987 and subsequent years.

**Dividends Per Share**
*Stock Data, Annual Item; Field 05101*

**All Industries:**
DIVIDENDS PER SHARE represents the total dividends per share declared during the calendar year for U.S. corporations and fiscal year for non-U.S. corporations. It includes extra dividends declared during the year.

Dividends Per Share is based on the "gross" dividend of a security, before normal withholding tax is deducted at a country's basic rate, but excluding the special tax credit available in some countries. This tax credit is due to the imputation system of corporate income tax under which shareholders are entitled to credit a certain proportion of the corporate income tax on distributed profits against the income tax imposed on the dividends received.

For companies with more than one type of common/ordinary share, dividends per share is shown for the share type identified in field 6005 - Type of Share.

This item is also available at the security level for 1987 and subsequent years.

**Earnings Per Share**

*Stock Data, Annual Item; Field 05201*

All Industries:

EARNINGS PER SHARE represents the earnings for the 12 months ended the last calendar quarter of the year for U.S. corporations and the fiscal year for non-U.S. corporations. It represents the fully diluted earnings per share (field 05290) for US companies and basic earnings per share (field 05210) for other companies.

It is as reported by the company except for Sweden where the Standard Tax Method has been used where not reported by the company. Where earnings per share is reported for Swedish companies it may be after standard or actual tax. If earnings per share is not reported by the company, an estimate based on the respective country's generic definition has been computed.

Preference stock has been included in the share base where it participates with the common/ordinary shares in the profits of the company. The following indicates the net earnings base used for earnings per share in each country.
In Austria, earnings per share are based on profit after tax and minority interest but before transfers to equity reserves. Per share earnings for Belgium, Denmark, France, Germany, Italy, Japan, Netherlands, Switzerland and the United Kingdom reflect profit after tax, minority interest, and preferred dividends (except where preferred is included in share base), generally including pre-tax extraordinary items. United Kingdom earnings per share exclude extraordinary items prior to 1993. However with the adoption of FRS3 they are now included.

Finland and Norway are based on profit before allocations to untaxed reserves (Finland all years; Norway prior to 1992 only) and before extraordinary items, after actual taxes, minority interest and preferred dividends. In Sweden profit before special adjustments and allocations to untaxed reserves but after an assumed 28% tax rate, (30% prior to 1994 and 50% in 1988 and previous years) and after minority interest and preferred dividends is used. Per share earnings in Spain are based on profit after Corporation tax and are generally after extraordinary items.

Where Corporation tax is not reported it has been estimated. All other countries base earnings per share on profit after tax, minority interest and preferred dividends but before extraordinary items. For companies with more than one type of common/ordinary share, earnings per share is based on combined shares adjusted to reflect the par value of the share type identified in field 06005 - Type of Share.

This item is also available at the security level for 1987 and subsequent years.

All Industries:
HEALTHCARE DATA – ACCUMULATED BENEFIT OBLIGATION represents an approximate measure of the liability of a plan in the event of a termination at the date the calculation is performed.
This item is usually only provided by those companies that follow IFRS or US GAAP accounting.
This item is only available in the annual time series at the company level.

**Healthcare Data – Amortization Of Prior Service Costs**
*Supplementary Data, Annual Item; Field 18838*
All Industries:
HEALTHCARE DATA – AMORTIZATION OF PRIOR SERVICE COSTS represents costs related to employee service in years preceding the adoption or amendment of a pension plan; these are referred to as prior service costs. These costs are amortized over future expected service periods of the employees.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.

This item is only available in the annual time series at the company level.

**Healthcare Data – Discount Rate**

*Supplementary Data, Annual Item; Field 18832*

All Industries:

HEALTHCARE DATA – DISCOUNT RATE represents the annual rate at which the projected future liabilities are discounted back to the present date.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.

This item is only available in the annual time series at the company level.

**Healthcare Data – Expected Long-Term Return Rate On Pension Assets**

*Supplementary Data, Annual Item; Field 18831*

All Industries:

HEALTHCARE DATA – EXPECTED LONG-TERM RETURN RATE ON PENSION ASSETS represents an estimate of the rate of return to be earned over the period until all benefits under the plan have been paid.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.

This item is only available in the annual time series at the company level.

**Healthcare Data – Expected Return On Plan Assets For The Period**

*Supplementary Data, Annual Item; Field 18843*

All Industries:

HEALTHCARE DATA – EXPECTED RETURN ON PLAN ASSETS FOR THE PERIOD represents the expected return on the pension plan investments plus the change in the carrying value of the plan assets used in operations.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.

This item is only available in the annual time series at the company level.

As this field is an expense field and amounts reported for Expected Return on Plan Assets are income, this field will always be updated with a minus (-).

**Healthcare Data – Fair Value Of Plan Assets**

*Supplementary Data, Annual Item; Field 18833*

All Industries:

HEALTHCARE DATA – FAIR VALUE OF PLAN ASSETS represents the value of the investments in the pension plan at a particular point in time.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.

This item is only available in the annual time series at the company level.

**Healthcare Data – (Gains) Losses From Settlements**

*Supplementary Data, Annual Item; Field 18840*

All Industries:

HEALTHCARE DATA – (GAINS) LOSSES FROM SETTLEMENTS represents an irrevocable transaction that relieves the employer (or the plan) of primary responsibility for a defined benefit pension obligation.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.

This item is only available in the annual time series at the company level.
This may be reported as a combined item as gains/losses from settlements/curtailments. Include gains/losses from curtailments if reported separately.

**Healthcare Data – Interest Cost**  
*Supplementary Data, Annual Item; Field 18839*  
All Industries:  
HEALTHCARE DATA – INTEREST COST represents annual interest costs, which reflect the financing costs in a pension plan. Interest expense accrues each year on the projected benefit obligation based on a selected interest rate.  
This item is usually only provided by those companies that follow IFRS or US GAAP accounting.  
This item is only available in the annual time series at the company level.

**Healthcare Data – Net Interest Cost**  
*Supplementary Data, Annual Item; Field 18848*  
All Industries:  
HEALTHCARE DATA – NET INTEREST COST is defined as the change in the value of net post retirement and healthcare liability/(asset) during the reporting period that arises from passage of time and determined by multiplying the net benefit liability/(asset) by discount rate, taking into account actual contributions and benefits paid during the reporting period. It reflects combined plans data where multiple plans exist.  
This item is usually provided by those companies that adopts IAS 19R under the IFRS reports published after 1st January 2013.  
This item is available in the annual original and annual restated time series for detailed companies, full update.

**Healthcare Data – Net Periodic Pension (Income)/Expense**  
*Supplementary Data, Annual Item; Field 18836*  
All Industries:  
HEALTHCARE DATA – NET PERIODIC PENSION (INCOME)/EXPENSE represents the amount recognized in an employer’s financial statements as the cost of a pension plan for a period.  
This item is usually only provided by those companies that follow IFRS or US GAAP accounting.  
This item is only available in the annual time series at the company level.

**Healthcare Data – Other Net Periodic Pension (Income)/Expense**  
*Supplementary Data, Annual Item; Field 18841*  
All Industries:  
HEALTHCARE DATA – OTHER NET PERIODIC PENSION (INCOME)/EXPENSE represents a component of Net Periodic Pension (Income)/Expense.  
This item is usually only provided by those companies that follow IFRS or US GAAP accounting.  
This item is only available in the annual time series at the company level.

**Healthcare Data – Pension Service Costs**  
*Supplementary Data, Annual Item; Field 18837*  
All Industries:  
HEALTHCARE DATA – PENSION SERVICE COSTS represents the expense caused by the increase in pension benefits payable (the projected benefit obligation) to employees due to services rendered during the current year. (Present value of new benefits earned by employees during the year). For example, when an employee is covered by a defined-benefit pension plan, the annual Service Cost is the increase in the present value of the future pension obligations due to an added year of service and salary.
This item is usually only provided by those companies that follow IFRS or US GAAP accounting.
This item is in the annual time series at the company level.

Healthcare Data – Projected Benefit Obligation (PBO)
*Supplementary Data, Annual Item; Field 18835*

All Industries:

HEALTHCARE DATA – PROJECTED BENEFIT OBLIGATION represents a measure of a pension plan’s liability at the calculation date assuming that the plan is ongoing and will not terminate in the foreseeable future.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.
This item is only available in the annual time series at the company level.

Healthcare Data – Unfunded Healthcare Defined Benefits
*Supplementary Data, Annual Item; Field 18830*

All Industries:

HEALTHCARE DATA – UNFUNDED HEALTHCARE DEFINED BENEFITS represents the difference between the accumulated benefit obligation and the fair value of plan assets when the accumulated obligation exceeds the fair value.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.
This item is only available in the annual time series at the company level.

Healthcare Data – Unrecognized Prior Service Cost
*Supplementary Data, Annual Item; Field 18844*

All Industries:

HEALTHCARE DATA – UNRECOGNIZED PRIOR SERVICE COST represents costs when a pension plan is initially adopted or amended to provide increased benefits, employees are granted additional benefits for services performed in years prior to the plan’s adoption or amendment.

This item is usually only provided by those companies that follow IFRS or US GAAP accounting.
This item is only available in the annual time series at the company level.

Healthcare - Net Healthcare Liability/(Asset) – Balance Sheet
*Supplementary (Pension) Data, Annual Item; Field 18847*

All Industries:

HEALTHCARE - NET HEALTHCARE LIABILITY/(ASSET) – BALANCE SHEET represents the amount of the post-retirement liability or asset to be reported on the balance sheet. It is Healthcare Plan-Projected Benefit Obligation (18835) – Healthcare-Fair Value of Plan Assets (18833) - Healthcare Plan-Unrecognized Prior Service Cost (18844) - Healthcare-Other Adjustments to Funded Status (18846) - Healthcare-Unrecognized Actuarial Gains/Losses (18845) – Healthcare-Other Adjustments to Funded Status for Net Pension/Post Retiremen

This item is available in the annual original and annual restated time series for detailed non-U.S. companies, full update.

Healthcare - Other Adjustments to Funded Status for Net Pension/Post Retirement Assets/Liabilities
*Supplementary (Pension) Data, Annual Item; Field 18846*

All Industries:

HEALTHCARE - OTHER ADJUSTMENTS TO FUNDED STATUS FOR NET PENISON/POST RETIREMENT ASSETS/LIABILITIES represents any miscellaneous items used in the adjustment to the funded status for net pensions assets/liabilities recognized in the Balance Sheet.

This item is available in the annual original and annual restated time series for detailed Non-U.S. companies, full update.

Healthcare - Unrecognized Net Actuarial Gain/Loss
*Supplementary (Pension) Data, Annual Item; Field 18845*
HEALTHCARE - UNRECOGNIZED NET ACTUARIAL GAIN/LOSS represents a measure of the difference between the actual experience and that expected based upon the actuarial assumptions, between two actuarial valuation dates.

This item is available in the annual original and annual restated time series for detailed companies, full update.

### I/B/E/S Ticker

*Descriptive Data, Current Item; Field 06038*

All Industries:

I/B/E/S TICKER represents the symbol used by I/B/E/S to identify companies for which they track earnings estimates. This item provides a link between the I/B/E/S and Worldscope databases.

### ICB Code

*Descriptive Data, Current Item; Field 07040*

All Industries:

ICB CODE represents an industry code within the Industrial Classification Benchmark (ICB) which was implemented as a result of a merger of the industrial classification of Dow Jones and FTSE. This benchmark allows for the comparison of companies through four hierarchical levels of industry classification. The ICB Code provided is the subsector code, the lowest level in the hierarchical structure.

Use of this data item requires a separate license with the data originator.

**Indicator - Multiple Share Company**  
*Descriptive Data, Current Item; Field 11501*  

All Industries:  
INDICATOR - MULTIPLE SHARE COMPANY indicates which companies currently have or in the past have had more than one type of common/ordinary share. A company meeting this criterion will have an "X" provided in this field.

**Indicator – Data Update**  
*Descriptive Data, Annual & Interim Item; Field 07034*  

All Industries:  
INDICATOR – DATA UPDATE indicates the status of data provided in the annual and interim time series. The following indicators are provided:

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Preliminary</td>
</tr>
<tr>
<td>2</td>
<td>FAST</td>
</tr>
<tr>
<td>3</td>
<td>Final</td>
</tr>
<tr>
<td>4</td>
<td>Only Specified Unconsolidated Data Fields are available.</td>
</tr>
<tr>
<td>5</td>
<td>Preliminary – Flash</td>
</tr>
<tr>
<td>6</td>
<td>Final – Flash</td>
</tr>
</tbody>
</table>

Preliminary (1) indicates the data is sourced from preliminary announcements. It may be used for both interim and annual time series.

Preliminary - Flash (5) indicates the data is sourced from preliminary announcements but that only data from the face of statements has been provided. Once all data from the preliminary release is completed this indicator will change to (1).

A Fast indicator (2) is provided for annual time series data to indicate that a subset of key financial data points has been completed using as source the final annual reports.

The Final indicator (3) is used for annual and interim series when updates are complete from final sources.

The Final - Flash indicator (6) is used to identify initial updates that only incorporate reported items from the face of the financial statements. Once all data from the final document is completed this indicator will change to (3).

A setting of 4 will be used to indicate when only Worldscope specified unconsolidated fields have been updated. The fields currently supported are as follows:

- Field 18169 Unconsolidated/Parent Company Depreciation
- Field 18170 Unconsolidated/Parent Company Sales
- Field 18171 Unconsolidated/Parent Company Pretax Earnings
- Field 18172 Unconsolidated/Parent Company Net Profit
- Field 18173 Unconsolidated/Parent Company Earnings per Share

An indicator of 4 may be used for both the annual and interim time series;
a) A company issues consolidated annual accounts but interim unconsolidated accounts only are reported; Worldscope unconsolidated fields only are updated on the interim time series.
b) There is a significant time delay between unconsolidated and consolidated filings; Worldscope unconsolidated fields are updated prior to the release of consolidated accounts.

Available for:
- Detailed, Limited and Fast update types
- Original and Restated Annual and Interim time series

**Indicator — Early Restatement Release**
*Descriptive Data, Annual & Interim Item; Field 11558*

**All Industries**

INDICATOR — EARLY RESTATEMENT RELEASE indicates if the company has announced restated data early i.e. prior to the publication of comparative data in the next period financial report. Data may be unaudited. The existing accounting standard field (07546) can be used to identify if the restated data is audited. In some cases, only key data may be provided. This indicator was added to support the transition period for IFRS changes.

If 11558 = 1, only a selection of key items have been provided by the company on a restated basis

If 11558 = 2, a company has released a full detail restatement prior to publication of comparative data in the next period financial report

**Indicator — Limited Data Set Company**
*Supplementary Data, Current Item; Field 11519*

**All Industries:**

INDICATOR — LIMITED DATA SET COMPANY when available indicates that only a limited set of data items is available for the company.

**Indicator — Non-Traded Company/Security**
*Descriptive Data, Current Item; Field 11528*

**All Industries:**

INDICATOR — NON-TRADED COMPANY/SECURITY indicates companies and securities which are held privately.

A company or security meeting this criterion will have an "X" provided in this field.

**Indicator — Period Sourced from Reuters Content**
*Descriptive Data, Annual & Interim Item; Field 11565*

**All Industries:**

INDICATOR — PERIOD SOURCED FROM REUTERS CONTENT indicates time series which have had data sourced from the Reuters Fundamentals product.

A company meeting this criterion will have an "X" provided in this field.

**Indicator — Pricing Unavailable**
*Descriptive Data, Current Item; Field 11568*

**All Industries:**

INDICATOR — PRICING UNAVAILABLE indicates the companies for which a pricing source is unavailable.

A company meeting this criterion will have an "X" provided in this field.

**Indicator — Primary Issue**
*Security Data, Current Item; Field 11526*

**All Industries:**
INDICATOR – PRIMARY ISSUE is provided on the security level identifier for the share type selected as the primary issue of the company. The prices and dividends for this share type are shown at the company level. An “X” is provided in this field on the security identifier selected as the primary issue.

**Indicator – Restated Data Exists**  
*Descriptive Data, Annual & Interim Item; Field 11556*

All Industries

INDICATOR – RESTATED DATA EXISTS indicates that Restated Time series content is available for a period. This indicator is populated on the original accounts data for the period restated data has been provided.

- If 11556 = 1, restated data exists
- If 11556 = 2, restated data exists and is now provided in the quarterly series

Example: If year 2004 Time Series Frequency A001 has a value of 1 in field 11556, then year 2004 Time Series Frequency B001 will contain restated content. If year 2004 S001 has a value of 2 in field 11556, then year 2004 Time Series Frequency C001 and C002 will contain restated accounts. This is the case where a company has switched from semi-annual to quarterly reporting.

**Indicator – Restatement Reason Code**  
*Descriptive Data, Annual & Interim Item; Field 11559*

All Industries

INDICATOR – RESTATEMENT REASON CODE provides standardized coding for identifying the general reason restated accounts have been provided. Only one code is provided. If a company adopted a Change in GAAP followed and also discontinued operations, a code would be given for Change in GAAP followed together with other events.

1. Where the accounts are restated due to Discontinued Operations, Spin-offs or de-mergers.
2. Where the accounts are restated due to the adoption of a new accounting policy or policies related to specific item or items
3. Where the accounts are restated due to Acquisition/Mergers
4. Where the accounts are restated due to a change in accounting GAAP followed by the company
5. Where the accounts are restated due to change in accounting GAAP followed together with other events
6. Where the accounts are restated due to multiple events
7. Where the accounts are restated due to reasons other than those noted above
8. Where the accounts are reclassified.

Existing field 07536 (accounting standards followed) can be used to identify the GAAP standard followed. Code 23 identifies if a company has adopted IFRS.

Example: If 11559 = 4 and 07536 = 23, the Restatement is for a company which has adopted IFRS.

Reason code 8 was introduced to identify restated comparative accounts due to a reclassification, i.e. where the presentation of an item is changed or accounting concepts are being classified differently. Data for this field is generally available from 2009-2010 onwards.

A company can also issue restated data to correct for accounting irregularities. This is when a company has made a material error in the application of existing accounting standards or even has committed fraud. The Worldscope treatment of accounting irregularities remains the same: the figures will be amended within the original time series.

**Indicator – Restatement Type**  
*Descriptive Data, Annual & Interim Item; Field 11557*

All Industries

INDICATOR – RESTATEMENT TYPE indicates if the restated data provided is Restated or Revised. Restated is defined as a change/event that occurred subsequent to the annual period for which the interim or annual restatement is provided. Revised is defined as a change/event which occurred within the annual period in which the interim is a part of. This indicator is provided on the Restated Times Series Frequency codes.
If 11557 = 1, data is restated
If 11557 = 2, data is revised

Example 1: A company switches to a new accounting standard from the first interim period for fiscal year 2005. Field 11557 on the restated annual and interim time series for 2004 is then 1.

Example 2: A company switches to a new accounting standard with the publication of the annual report for fiscal year 2005. Value for field 11557 on the restated interim time series for 2004 is then 2.

Example 3: A company restates its first quarter when releasing second quarter results for 2005. Value for field 11557 on the 2005 restated quarter for 2005 is then 2.

Indicator – Reuters Data Company
*Descriptive Data, Current Item; Field 11563*

All Industries:

INDICATOR – REUTERS DATA COMPANY indicates which companies currently have data provided by the Reuters Fundamentals product.

A company meeting this criterion will have an "X" provided in this field.

Indicator – Sponsored/Unsponsored
*Descriptive Data, Current Item; Field 11502*

All Industries:

INDICATOR – SPONSORED/UNSPONSORED indicates whether or not the ADR is a sponsored or unsponsored program. An "S" in this field indicates sponsored, a "U" indicates unsponsored.

This item is only available for ADRs.

Indicator – Trades ADR
*Descriptive Data, Current Item; Field 11496*

All Industries:

INDICATOR - ADR indicates companies which have American Depository Receipts trading on a U.S. exchange. If a company has ADRs and the ADRs record is available on Worldscope, an "X" would be provided in this field.

Industry Group
*Descriptive Data, Current Item; Field 06011*

A. No standard text
C. Change reporting practice to excluded effect of allocations to reserves
D. Net income before effects of minority interest

**Net Income Before Extraordinary Items/Preferred Dividends**

*Income Data, Annual & Interim Item; Field 01551*

All Industries:

NET INCOME BEFORE EXTRAORDINARY ITEMS/PREFERRED DIVIDENDS represents income before extraordinary items and preferred and common dividends, but after operating and non-operating income and expense, reserves, income taxes, minority interest and equity in earnings.

If a company reports discontinued operations it is treated as follows:

a. If the discontinued operations are purely an operating gain or loss on a business segment the company is discontinuing, income including the discontinued operations will be shown.

b. If the discontinued operations include disposal (gain or loss on a sale), then earnings per share is examined. If a separate per share amount is shown for discontinued operations and a separate per share
amount is shown for disposal, the discontinued operations portion is included in net income and the
disposal portion is treated as an extraordinary charge or credit. If one per share amount for discontinued
operations is reported and it includes disposal, then net income before discontinued operations is shown
and the discontinued operations is treated as an extraordinary item.

Net Income Used To Calculate Earnings Per Share (Formerly Net Income Available To Common)
Supplementary (Income) Data, Annual & Interim Item; Field 01751
All Industries:
NET INCOME USED TO CALCULATE EARNINGS PER SHARE represents the net income the company uses to
calculate its earnings per share. It is before extraordinary items.

For U.S. corporations, it is one of the following:
a. Net income after preferred dividends
b. Common and common equivalent net income (includes effect of those securities considered common
equivalent)
c. Fully diluted net income (includes the effects of all convertible securities and the exercise of stock
options and warrants)

For Non-U.S. corporations, it is generally net income after preferred dividends. It is not necessarily the
numerator for the earnings per share calculation.

Footnotes:
A. No standard text
C. Changed reporting practice to exclude effect of allocations to untaxed reserves
D. Net income is before the effect of minority interest

Net Income Used To Calculate Fully Diluted Earnings Per Share
Supplementary (Income) Data, Annual & Interim Item; Field 01705

Risk Weighted Assets

Supplementary Data, Annual & Interim Item; Field 18156

Banks, Other Financial Companies:

RISK WEIGHTED ASSETS represents the total of the carrying value of each asset class multiplied by their assigned risk weighting, as defined by banking regulations. This item may also be referred to as risk adjusted assets and may be abbreviated as RWA.

If this item is not reported then it is calculated by taking the dollar value of Total Capital (as reported by the bank) and dividing it by the Capital Ratio (as reported by the bank). If only the dollar value of Tier1Capital and Tier1Ratio are reported then these items would be substituted for Total Capital and Capital Ratio in the calculation (as reported by the bank).

This item is available in the annual time series and the quarterly, semi-annual and trimester interim time series. It is only available at the company level.

SIC Codes
Descriptive Data, Current Items; Fields 07021, 07022, 07023, 07024, 07025, 07026, 07027, 07028

All Industries:
SIC CODES were developed by the U.S. government to provide a standard industry classification that covers all the economic activities of the United States. They are derived from the 1987 edition of the Standard Industrial Classification Manual compiled by the Executive Office of the President of the United States, Office of Management and Budget. These SIC codes are assigned to both U.S. and non-U.S. companies according to the type of business in which they are engaged. A company may have up to eight SIC codes assigned to it or as little as one depending on the number of business segments that make up the company's revenue. If a sales breakdown for segments is available SIC Code 1 would represent the business segment which provided the most revenue. SIC Code 8 would represent the segment that provided the least revenue. If a sales breakdown is not available the SIC Code is assigned according to the best judgement of Worldscope.

Thomson Reuters Business Classification (TRBC) Code
*Descriptive Data, Current Item; Field 07041*

All Industries:

TRBC CODE represents an industry code within the Thomson Reuters Business Classification schema.

Thomson Reuters Business Classification schema (TRBC) is the global, comprehensive industry classification system owned and operated by Thomson Reuters. The market based system helps identify, analyze and monitor industries across global markets. This classification allows for the comparison of companies through multiple hierarchical levels of industry classification. The TRBC code provided is generally the lowest level code in the hierarchical structure.

Thomson Reuters Business Classification (TRBC) Codes Description/Hierarchy

Companies are assigned with an Activity, the lowest level. The Industry, Industry Group, Business Sector and Economic Sector assignments are derived from the classification hierarchy.

All Industries:
Arithmetic average of the last five years of Working Capital % Total Capital
**Worldscope Identifier**  
*Descriptive Data, Current Item; Field 060.35*

**All Industries:**

WORLDSCOPE IDENTIFIER represents the nine digit identifier used by Worldscope to identify companies/securities on the database. This item is also available at the security level.

**U.S. COMPANY IDENTIFIERS:**

The nine digit CUSIP is used.  
Bytes 1-6: Six digit company identifier  
Bytes 7-8: Security identifier  
Byte 9: Check digit

**U.S. SECURITY IDENTIFIERS:**

With the exception of the primary issue of the company the nine digit CUSIP assigned to the security is used. The primary issue is defined as the most widely traded security and the CUSIP assigned to this issue has already been used as the company identifier. For this reason, the security identifier for the primary issue is derived by using the first 6 digits of the company identifier followed by a "9" as the seventh digit, another number and a check digit.

**NON-U.S. COMPANY IDENTIFIERS:**

A derived identifier based on the country where the company is domiciled is used.

Byte 1: C  
Bytes 2-4: WORLDSCOPE Nation Code  
Bytes 5-8: Four digit unique company identifier  
Byte 9: 0

**NON-U.S. SECURITY IDENTIFIERS:**

A derived identifier based on the country where the company is domiciled is used. This identifier is identical to the company identifier except that the "0" at the end is replaced with a letter.

**COUNTRY AVERAGE IDENTIFIERS (Industrial Companies only):**

Byte 1: A  
Bytes 2-4: WORLDSCOPE Nation Code  
Bytes 5-9: filled with zeros  
For example: A25000000 is the country average for France  
"A" identifies the record as an Average record  
"250" is the Nation Code for France  
For the name of the country average see WORLDSCOPE field 06001 (Company Name)

**INDUSTRY AVERAGE IDENTIFIERS:**

Byte 1: A  
Bytes 2-4: WORLDSCOPE Nation Code  
Byte 5: 0  
Bytes 6-9: WORLDSCOPE Industry Code  
For example: A38004310 is the industry average for Italian Banks  
"A" identifies the record as an Average record  
"380" is the Nation Code for Italy
"4310" is the industry code for banks
For the name of the industry average see WORLDSCOPE field 06001 (Company Name).

INDEX IDENTIFIERS:
Byte 1: I
Bytes 2-4: WORLDSCO Nation Code
Bytes 5-7: filled with zeros
Byte 8: Number of the index
Byte 9: 0
For example: I25000010 indicates that the index values are for a French index.
"I" identifies the record as an index record
"250" is the Nation Code for France

EXCHANGE RATE IDENTIFIERS:
Byte 1: space
Byte 2: E
Byte 3: X
Byte 4: C
Byte 5: H
Byte 6: space
Bytes 7-9: WORLDSCO Nation Code
For example: " EXCH 756" is the exchange rate identifier for Switzerland's exchange rate.
"756" is the Nation Code for Switzerland

Worldscope Identifier - Mult Share 1, 2, 3, 4, 5, 6, 7
Descriptive Data, Current Items; Fields 20003, 20103, 20203, 20303, 20403, 20503, 20603, respectively

All Industries:

WORLDSCOPE IDENTIFIER - MULT SHARE 1, 2, 3, 4, 5, 6, 7 represents a nine digit code assigned by Worldscope for each type of common/ordinary share of a company. This identifier provides a link to the detailed information for each security.

See definition for WORLDSCOPE IDENTIFIER for information on how this identifier is derived.

Worldscope Permanent I.D.
Descriptive Data, Current Items; Field 06105

All Industries:

WORLDSCOPE PERMANENT I.D. represents a permanent identifier assigned to a company or security on the database. For non-US companies and securities, it is the Worldscope Identifier. For US companies and securities, it is derived using the same method used for non-US identifiers. These identifiers are based on the country where the company is domiciled and are derived as follows:
Byte 1: C
Bytes 2-4: WORLDSCOPE Nation Code
Bytes 5-8: Alpha numeric company portion of I.D.
Byte 9: 0 indicates a Company entity; a letter a Security entity
This item is also available at the security level.

- COA code: MBBC
- Units: Period header Currency, Following Period Header Unit
- Annual History: Since 2002
- Quarterly History: Since 2005
- COA Type: Industry
- Data Type: Airlines Operating Metrics, IS

EBITDAR [MBBC] represents earnings before interest, taxes, depreciation, amortization and obsolescence and aircraft rent. It is a non-GAAP financial measure.

Thomson Reuters collects EBITDAR [MBBC] as it is disclosed by the company, and not calculate it if the company does not report this value.

This information is generally obtained from the Management's Discussion and Analysis of the company’s operating performance.

Definition revised October 2007.

**Passengers, Total**  
**COA Code MBBE**

- COA code: MBBE
- Units: Whole Number

- Quarterly History: Since 2005
- COA Type: Industry
- Data Type: Airlines Operating Metrics, IS

Passengers, Total [MBBE] represents the number of persons on board a flight who is not a member of the flight or cabin crew.

This information is generally obtained from the Management's Discussion and Analysis of the company’s operating performance.

Definition revised October 2007.

**Revenue Passengers**  
**COA Code MBBG**

- COA code: MBBG
- Units: Whole Number
- Annual History: Since 2002
- Quarterly History: Since 2005
- COA Type: Industry
- Data Type: Airlines Operating Metrics, IS

Revenue Passengers [MBBG] represents the total number of paying passengers flown on all flight segments.
If the company does not specify the nature (total, enplaned or revenue) of the number of the passengers disclosed in its Management’s Discussion and Analysis, Thomson Reuters collects the number of passengers disclosed by the company as Revenue Passengers [MBB].

Definition revised October 2007.

**Enplaned Passengers**  \( \text{COA Code MBBK} \)

- **COA code**: MBBK
- **Units**: Whole Number
- **Annual History**: Since 2002
- **Quarterly History**: Since 2005
- **COA Type**: Industry
- **Data Type**: Airlines Operating Metrics, IS

Enplaned Passengers [MBB] represents the total number of revenue passengers boarding aircraft. This information is generally obtained from the Management’s Discussion and Analysis of the company’s operating performance.

Definition revised October 2007.

**Revenue Passenger Kilometers (RPK)**  \( \text{COA Code SBBQ} \)

- **Units**: Whole Number, Following Period Header Unit
- **Annual History**: Since 2002
- **Quarterly History**: Since 2005
- **COA Type**: Industry
- **Data Type**: Airlines Operating Metrics, IS

Revenue Passengers Kilometers (RPK) [SBBQ] captures the total distance flown by the airline’s revenue passengers in kilometers. This is a measure of total passenger traffic for an airline. It represents the sum of:

- Revenue Passenger Miles (RPM) [MBBO], converted into kilometers using the following conversion factor - where one mile is equivalent to 160934 kilometers
- Revenue Passenger Kilometers (RPK) [MBBQ]

Definition revised March 2008.

Available Seat Kilometers (ASK) [SBDG] captures the total flight passenger capacity of an airline in kilometers. It is obtained by multiplying the total number of seats available for scheduled passengers and the total number of kilometers those seats were flown.

It represents the sum of:

- Available Seat Miles (ASM) [MBDE], converted into kilometers using the following conversion factor - where one mile is equivalent to 1.60934 kilometers
- Available Seat Kilometers (ASK) [MBDG]

Definition revised March 2008.

Load Factor, Total - % [MBDL] represents the Company level Load Factor percentage that is reported by the company. This item is used as the line item display for the Standard Format Financial Statements.

It represents the percentage of aircraft seating capacity that is actually utilized, and is obtained using revenue passenger miles/kilometers, divided by available seat miles/kilometers.

In the event that the Company level Load Factor, Total - % [MBDL] is not reported by the company, Thomson Reuters will calculate the item using Revenue Passengers Kilometers (RPK) [SBBQ], divided by Available Seat Kilometers (ASK) [SBDG], multiply by 100%. However, if any of the above components are not reported by the company, this item Load Factor, Total - % [MBDL] will not be calculated.

Thomson Reuters will collect any segmental breakout information provided by the company using: Load Factor - % [MBDK].

Revenue per ASK [SBDQ] captures the revenue earned by each available seat kilometer of an airline. This item is used as the line item display for the Standard Format Financial Statements.

It is obtained by using total revenues divided by the total available seat kilometers of an airline.

Contingent upon the units reported by the company, it represents either one of the following:

- Revenue per ASM, Total [MBDP], converted into kilometers using the following conversion factor - where one mile is equivalent to 160934 kilometers
- Revenue per ASK, Total [MBDR]

Revenue per ASK [SBDQ] will not be reported in the following scenarios:

- The company reports the item using more than one unit construct.
- There is more than one instance of the Company level Revenue per ASK for the reported unit.

Passenger Haul, Average Length (Kilometers) [SBFG] captures the average distance traveled by a scheduled fare paying passenger of the airline in kilometers. This item is used as the line item display for the Standard Format Financial Statements.

Contingent upon the units reported by the company, it represents either one of the following:

- Passenger Haul, Average Length (Miles), Total [MBFF], converted into kilometers using the following conversion factor - where one mile is equivalent to 160934 kilometers
• Passenger Haul, Average Length (Kilometers), Total [MBFH]

In the event that the company reports the Company level Passenger Haul in both constructs (miles and kilometers), Thomson Reuters will calculate Passenger Haul, Average Length (Kilometers) [SBFG] using Revenue Passenger Kilometers [SBBQ], divided by Revenue Passengers [MBBG].

However, if any of the above components are not reported by the company, this item will not be calculated.

Passenger Haul, Average Length (Kilometers) [SBFG] will not be reported in the following scenario:

Days in Claims Payable excl. Capitation [MMJE] represents medical claim liabilities at the end of the period divided by average medical expenses per day in the quarterly period, excluding capitation.

Companies may have some providers under capitation payment arrangements. Capitation refers to the system of payment for each customer served, rather than by service performed. Such capitation payment arrangements do not require a medical claim IBNR reserve.

Hence, companies with such capitation payment arrangements will usually summarize the DCP metric excluding capitation expense.

Average Production per Mine (Metric Tonnes) [SMPG] captures the average production volume of a mineral per mine, in Metric Tonnes, of a mining company.

Thomson Reuters collects Average Production per Mine (Metric Tonnes) [SMPG] only when one type of mineral is produced in the mine.

Contingent upon the units reported by the company, it represents either one of the following:

- Average Production per Mine (Metric Tonnes), Total [MMPH]
- Average Production per Mine (Long Tons), Total [MMPF], converted into Metric Tonnes using the following conversion factor - where one Long Ton is equivalent to 1.01605 Metric Tonne
- Average Production per Mine (US Tons), Total [MMPL], converted into Metric Tonnes using the following conversion factor - where one US Ton is equivalent to 0.90718 Metric Tonne

Average Production per Mine (Metric Tonnes) [SMPG] will not be reported in the following scenarios:

- The company reports the item using more than one unit construct
- There is more than one instance of the Company level Average Production for the reported unit.

Oil and Gas [MOGI] represents the oil and gas industry for Income Statement Operating Metrics information collected by Thomson Reuters. This includes all the operating indicators for the oil and gas industry, reported by the company.

The Oil and Gas Industry consists of:

- Integrated Oil & Gas companies engaged in the exploration, production, refinement and distribution of oil and gas.
- Oil & Gas Exploration & Production companies engaged in the exploration and extraction of crude petroleum and natural gas.
- Oil & Gas Refining & Marketing companies engaged in the operation of oil and gas refineries for the production of heating, lubricating, and fuel oils, as well as gasoline, diesel, jet fuel, propane, kerosene and other liquefied petroleum gas (LPG) products.
- Oil & Gas Drilling companies engaged in oil and gas drilling services on a contract basis. Services include, directional drilling, well drilling and reconditioning of oil and gas field wells.

The Operating Metrics information is generally obtained from the Management’s Discussion and Analysis of the company’s operating performance.
